

# theCobra

Headquartered in Novato, California, UmeVoice, Inc. makes software and hardware voice recognition and noise canceling technologies.

In the image above, the green arrows show the targets' voice. The blue arrows show extraneous background noise.

- **Noise Rejection takes a new shape:**

UmeVoice's patented noise cancellation technology rejects extraneous background noise.

An acoustically based approach; theCobra™ accentuates the speaker's voice by concentrating it on the front port of a two-port microphone, while deflecting background noise from the back port.

- **The Best Speech Intelligibility:**

UmeVoice's technology improves intelligibility scores to 82% in noise levels of 105 dB compared to 72% intelligibility for the M-87 noise canceling microphone. (Source USAFRL)

- **Dramatic Noise Reduction:**

theCobra™ has an average 10 dB improvement over the M-87 with a maximum of 30 db improvement in average speech bandwidth.

- **Ideal for high noise environments:**

Suited for use in any aviation and many military applications.

theCobra's™ noise rejection performance surpasses all passive or active micro-phonic systems including 2-port, 2-active and array microphone designs. The difference is particularly stark in high noise levels.
